EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeffrey Pyle on 11/13/2009. The claims are amended to specify that the stress member is continuous through the entire sensor module, and not just the portion of the sensor module housing the geophone.

The application has been amended as follows:

Claim 1 is amended to read:

A seabed seismic cable, comprising:

a sensor module;

at least one first lead to or from the sensor module;

a geophone housed in the sensor module;

a stress member extending continuously through the sensor module

independently of any lead, including that portion of the sensor module

housing the geophone;

a first sheath enclosing the first lead and the stress member, the first sheath

terminating at each end of the sensor module; and

at least one mechanical guide in the sensor module deflecting the stress member.

Claim 18 is amended to read:

A seabed seismic cable comprising:

a sensor module;

a geophone housed in the sensor module;

at least one lead deployed in an SZ winding, wherein the lead extends to or from
the sensor module;

a stress member extending continuously through the sensor module
independently of any lead, including that portion of the sensor module
housing the geophone; and

a sheath enclosing the leads and the stress member, the sheath terminating at
each end of the sensor module.

Claims 20-31, drawn to a non-elected invention, are cancelled.

Allowable Subject Matter

Claims 1-19 are allowed.

The following is an examiner's statement of reasons for allowance:

The closest prior art (Oldervoll) teaches a seabed cable including leads and stress members. The closest prior art also teaches a sheath enclosing the leads and stress member. The closest prior art teaches a stress member that is continuous through the sensor module, but teaches only that the stress member is continuous

through the two ends of the sensor module, but is external to the portions of the sensor module housing the sensors and electronics. The current claims require that the stress member be continuous through the sensor module, including the portion housing the geophone. The closest prior art does not teach a sensor module and stress member with this configuration, as the stress member in the prior art is external to the portion of the sensor module housing the geophone.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
